Result Analytics & Reporting

A complete role-based online exam workflow

Apex Exam supports the complete exam lifecycle from user registration and role login to module setup, exam scheduling, question creation, timed student attempts, automatic submission, and result tracking.

A

Purpose

Provide a simple and reliable web platform for educational institutes to conduct online MCQ exams with controlled timing and clear result management.

A

User Roles

Admin manages users, modules, exams, and overall results. Lecturers create questions and review outcomes. Students start exams and view marks.

A

Main Workflow

Admin setup -> lecturer question creation -> student timed attempt -> auto/normal submission -> marks and result reports.

A

UI Theme

Modern blue and white interface with clean cards, status badges, responsive tables, and consistent navigation across dashboards.

Reviewed implementation highlights

- Role-based session protection routes users to admin, lecturer, or student dashboards.
- Passwords are stored using PHP password_hash and verified with password_verify.
- Prepared SQL statements are used for login, registration, CRUD actions, attempts, and result submissions.
- Exams support start/end windows, duration, instructions, open/closed status, and single-attempt checks.
- Student attempts are tracked through an exam_attempts table with in_progress, submitted, and expired states.
- The timer JavaScript removes required radio validation during automatic expiry submission and safely submits the form.

Application structure and database design

The project is organized into clear role-based folders and shared system files. This structure keeps authentication, dashboards, exam setup, student attempts, and reporting maintainable.

Folder / File Area	Purpose
auth/	Student registration, login processing, logout, password hashing, and portal access.
admin/	Admin dashboard, user management, module management, exam setup, and all-result views.
lecturer/	Lecturer dashboard, MCQ question creation, question management, and result viewing.
student/	Student dashboard, available exams, start exam, submit exam, result, and result history.
includes/	Shared auth checks, header/footer, base path handling, and exam helper functions.
database/	MySQL schema and sample accounts for running the system.

Core database tables

users

modules

exams

questions

student_answers

exam_attempts

results

- Foreign keys connect modules to lecturers, exams to modules, questions to exams, and results to students/exams.
- Unique constraints prevent duplicate exam attempts and duplicate final results for the same student and exam.
- Result records store marks, total marks, and submission time for reporting.

Member ownership

Each member is mapped to a clear part of the Apex Exam system. The branch names below can be used for GitHub contribution separation and project explanation.

**Anuradha****Smart Student Examination System**

Branch: Smart-Student-Examination-System

Student dashboard, available exam list, start exam, MCQ answering, smart timer, server-side attempt protection, auto-submit support, and instant result flow.

**Supuni****Authentication & User Management**

Branch: Auth-User-Management

Login, registration, logout, session management, role-based access, student account creation, and admin-side user management.

**Pabasha****Module & Exam Management**

Branch: Module-Exam-Management

Module CRUD, lecturer allocation, exam creation, exam instructions, duration, schedule windows, status control, and lecturer MCQ question management.

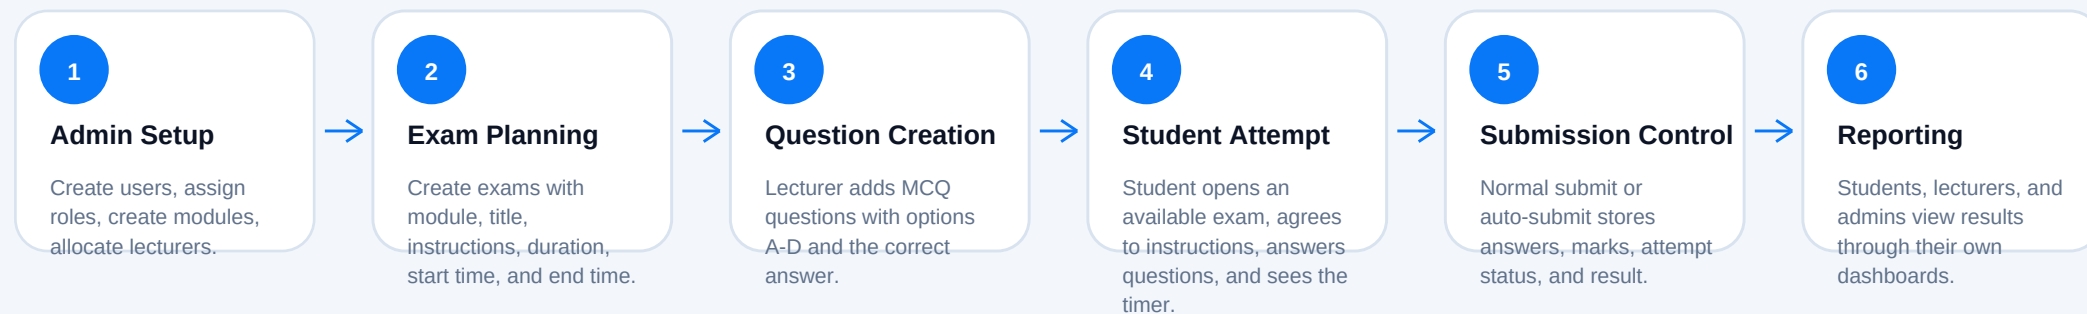

**Damsi****Result Analytics & Reporting**

Branch: Result-Analytics-Reporting

Student mark history, instant performance display, lecturer student-result table, admin all-results table, and result record management.

How the system works

The system follows a clean exam lifecycle: the admin prepares the environment, lecturers create assessment content, students attempt available exams within the window, and results are stored for reporting.

Advanced controls included

- Smart countdown timer with warning and danger states
- Auto-submit when remaining time reaches zero
- Server-side deadline check with 30-second grace handling
- Single attempt protection using unique attempt and result records
- Open, closed, submitted, expired, in-progress, and unavailable status states

Screenshots are grouped by module ownership

The following pages present the website interface screens with clean captions. Each screenshot is placed on its own page or in a clearly separated layout to keep the PDF readable and professional.

SMART EXAMS. SECURE RESULTS. BETTER FUTURE.

Apex Exam

The smarter way to take exams online with timed delivery, fair participation controls, and instant result tracking for students, lecturers, and admins.

Get Started

View Features

Secure & Reliable

Role-based access and controlled exam attempts.

Timed Exams

Countdown delivery with server-side submission checks.

Real-time Results

Marks are calculated as soon as an exam is submitted.

Accessible Anywhere

Responsive screens for laptops, tablets, and phones.

Landing Page Hero

Shared UI

Public landing hero with Apex Exam branding, smart exam message, call-to-action buttons, and feature highlights.

ABOUT

**Designed for focused
online assessment
workflows.**

For students

Find available exams, read instructions, complete timed papers, and review marks from one portal.

For lecturers

Create questions, manage assessments, and inspect submitted results without switching systems.

For admins

Manage modules, users, exam schedules, and result records with a consistent control panel.

FEATURES

**Controls that keep exam
sessions clear and
dependable.**

01

Availability Windows

Start and end times decide when students can participate.

02

Single Attempt Guard

Completed exams cannot be submitted again by direct URL or POST.

03

Accurate Scoring

Unanswered questions count toward the total and selected answers are checked against the exam.

04

Responsive UI

Tables, forms, cards, and exam questions adapt without overlapping.

HOW IT WORKS

**A simple path from setup
to submission.**

Landing Page Features and Workflow

Shared UI

About, feature, and workflow sections explaining the system value for students, lecturers, and admins.

TO SUBMISSION.

1

Create modules and exams

Admins define the exam schedule and module ownership.

2

Add questions

Lecturers attach MCQ questions to active exams.

3

Start and submit

Students join during the allowed window and submit before time expires.
